RE Results of June, 2006 Former Nike Launch Site #81 Site Reassessment Sampling Event

Dear (b) (6)

The U.S. Environmental Protection Agency (EPA) greatly appreciates your cooperation in this year's sampling event for the Former Nike Launch Site #81, located in Poulsbo, Washington. This sampling event was undertaken to further assess groundwater down-gradient of the former Nike site to specifically address contaminants which had not been included in previous studies of the site. These compounds include N-Nitrosodimethylamine, or NDMA, perchlorate and Unsymmetrical Dimethyl Hydrazine (UDMH), all of which are associated with Nike missile fuels.

The purpose of this letter is to transmit a copy of the sampling results for your well (enclosed). **As you will note, none of the targeted compounds addressed in this sampling event were detected in your well above the detection limits for the analytical methods used.** The entire final report for the sampling event, called a Site Reassessment (SR) Report, can also be made available to you upon request by contacting me at the number indicated below.

Based on a review of the SR report, EPA has determined that no further action is warranted at the Former Nike Launch Site #81 site. A no further action designation means that no additional steps under the Federal Superfund Program will be taken at the site unless new information warranting further Superfund consideration is discovered. If you have any questions, please feel free to contact me directly at (206)553-2782. Again, thank you for your help during the site visit.

Sincerely,

Ken Marcy
